

$(\mathbf{Y}_2)$ Natural NCT Value

$(\mathbf{Y}_1)$ Natural TPF Value

- 
- A scatter plot showing the relationship between Natural TPF Value ($\mathbf{Y}_1$) on the x-axis and Natural NCT Value ($\mathbf{Y}_2$) on the y-axis. The plot contains a large number of blue dots representing samples from the natural $\mathbf{Y}$ distribution. A specific region S is highlighted with a light red circle, and its inner CARE embedding is shown as a dark red square. The legend at the bottom left explains these elements.
- Original desired region S
 - Inner CARE embedding of S
 - Samples from natural $\mathbf{Y}$ distribution
